

46. The process of claim 40 wherein the amphetamines are amphetamine bases.

REMARKS

All of the claims distinguish over Mehta U.S. Patent 5,837,284 which was relied on by the Examiner in the parent application.

Independent claims 19 and 36 define that the second maximum concentration is greater than the first, whereas Mehta discloses the opposite.

Independent claims 23 and 40 define release from the delayed dose within 60 minutes, which is clearly different from Mehta.

Independent claim 30 defines that amphetamines are used to treat ADHD without requiring more than one dose over eight hours. Mehta is limited to methylphenidate and is not sufficient to teach one skilled in the art that amphetamines can be effectively used for ADHD by a single administration over eight hours by use of an immediate dose and a delayed dose.

All claims are allowable.

Respectfully submitted,

Elliot M. Olstein, Esq.
